# EORTC - NCI - ASCO Diagnostic Development Tutorial

Dear Colleagues,

The European Organization for Research and Treatment of Cancer (EORTC), the National Cancer Institute (NCI) and the American Society of Clinical Oncology (ASCO) are offering the second tutorial on development of diagnostic tests for representatives from the diagnostics industry and for young clinical researchers working in biomarkers and cancer drug development. "From Hypothesis to Product: an EORTC-NCI-ASCO Diagnostics Development Tutorial" will be held on Wednesday and Thursday, November 14-15, 2007 prior to the "EORTC-NCI-ASCO International Meeting on Molecular Markers in Cancer to be held November 15-17, 2007.

The tutorial is designed to address the critical issues that researchers and test developers must consider when developing new tools to aid clinical decision-making for patients with cancer.

Participants will work in teams to put together development plans for serum or tissue-based tests that will aid clinical decisions in cancer management such as assessment of prognosis, prediction of response to therapy or monitoring disease recurrence. We expect this to be a thought-provoking and productive course for both participants and faculty.

For registration and to review the learning objectives, a draft of the program and information concerning the main conference, please visit the EORTC website ([www.eortc.be](http://www.eortc.be)). A syllabus will be provided that will contain the case studies, important information about regulatory issues, the slide sets from the speakers, and other relevant background materials.

We look forward to meeting you in Brussels!

The Tutorial Organizing Committee:

Sheila E. Taube, PhD  
National Cancer Institute  
USA

Nils Brüner, MD  
University of Copenhagen  
Denmark

Fred C.G.J. Sweep, PhD  
Radboud University Nijmegen  
The Netherlands

Richard L. Schilsky, MD  
University of Chicago
